

LEARNING OBJECTIVES

The training is comprehensive without being complex in detail and covers everything required to manage mouth care for vulnerable adults. Plenty of practical advice is given throughout the training to help develop practical skills and build confidence.

By the end of the training, participants will have learned:

- **Best Practices in Mouth Care:**

Effective oral care techniques, including support for individuals with complex needs and proper denture care.

- **Common Oral Health Issues:**

Identification and management of conditions such as bleeding gums, dry mouth, and ulcers.

- **Oral and General Health Link:**

Understanding how oral health impacts overall well-being and systemic health.

- **Best Practices and Clinical Governance:**

Compliance with current standards, policies, and quality care frameworks.

- **Oral Health Assessments:**

How to assess oral health needs, including identifying soft tissue findings.

- **Managing Resistant Behavior:**

Practical strategies to support individuals who resist mouth care.

- **End-of-Life Oral Care:**

Latest guidance, recommended tools, and best practices for maintaining comfort and dignity in end-of-life mouth care.
